I moved them two slides earlier. See what you think. OK?

My goal for asking you to include relative effectiveness in the presentation was to just set the stage as to what relative effectiveness is and how it factors into the x axis of the hockey stick graphic and get everyone ready for Matt. Here is my reaction for these two slides:

1. It highlights the differences between the Phase 5 and 6 models, which is probably a good thing
2. It is going to put a big bullseye on the Conowingo issue and you are going to have to explain dynamic equilibrium and everything else before you are ready. In fact, now that I think about it, these two slides might be a very good way to illustrate how Conowingo is now simulated and the impact this is having.

My suggestion...if you use them, move them to the slide right before the WQGIT policy discussion on Conowingo..ie what is currently now slide 20.

Nicki/Kristen,

I met with Rich to discuss tomorrow's presentation and he recommended that I include the two relative effectiveness maps that Gary put together (now slides 10 and 11) to accompany the bar graphs. I don't think there's a need to re-distribute the presentation, as I can bring it on a flash drive but totally your call.

Thanks,
Lucinda
